

AC Repair and Services System Master.php has SqliInjection

AC Repair and Services System Master.php has SqliInjection, The basic introduction of this vulnerability is that SQL injection means that the web application does not judge or filter the validity of user input data strictly. An attacker can add additional SQL statements to the end of the predefined query statements in the web application to achieve illegal operations without the administrator's knowledge, so as to cheat the database server to execute unauthorized arbitrary queries and further obtain the corresponding data information.

```
31     }
32     }else{
33         $resp['status'] = 'failed';
34         $resp['error'] = 'Unkown '.$path.' path';
35     }
36     return json_encode($resp);
37 }
38 function save_service(){
39     extract($_POST);
40     $data = "";
41     foreach($_POST as $k => $v){
42         if(!in_array($k, array('id'))){
43             if(!empty($data)) $data .= ",";
44             $v = htmlspecialchars($this->conn->real_escape_string($v));
45             $data .= " `{$k}`='{$v}' ";
46         }
47     }
48     $check = $this->conn->query("SELECT * FROM `service_list` where `name` = '{$name}' ".(!empty($id) ? " and id = '{$id}' " : ""));
49     if($this->capture_err())
50         return $this->capture_err();
51     if($check > 0){
52         $resp['status'] = 'failed';
53         $resp['msg'] = "Service Name already exists.";
54         return json_encode($resp);
55         exit;
56     }
57     if(empty($id)){
```

```

(custom) POST parameter 'MULTIPART id' is vulnerable. Do you want to keep testing the others (if any)? [y/N] N
sqlmap identified the following injection point(s) with a total of 344 HTTP(s) requests:
